DRV Technologies Adds eMail Authentication in SpoolFlex V4.3

ATLANTA – January 21, 2009 – DRV Technologies, Inc., the developer of SpoolFlex report and document management software for the IBM Power Systems (IBM i, System i, iSeries, AS/400), announces the addition of eMail Authentication to its software. This removes a big obstacle for companies wanting to send e-mails from their IBM Power Systems.

SpoolFlex is an IBM Power System host based application that allows organizations to reduce printed output from their application by transforming and distributing reports as pc-compatible files including Excel and PDF via e-mail without any programming.

Many organizations encounter requirements by their e-mail Service Provider to send e-mail with authentication due to increased abuse by spammers, said Richard Voss, President of DRV Technologies. The most common method of sending e-mails from the IBM System (using IBM API's) does not support authentication. We developed our own method for sending e-mail directly from our software bypassing the requirement for any IBM e-mail API's.

According to Voss, this new feature enables companies to send e-mail directly from their IBM Power Systems and fully supports authentication with minimal setup. Many companies are realizing they can greatly reduce costs by sending reports as e-mail but run into a wall when their e-mail Service Provider requires e-mail authentication and their IBM Power Systems do not support it. Since we have added the e-mail authentication into all of our products there has been an overwhelming demand for the update.

About DRV Technologies, Inc.

DRV Technologies, an IBM Business Partner, provides Report Distribution and Document Management solutions for the IBM Power Systems (IBM i, System i, iSeries, AS/400). DRV Technologies' solutions are installed around the globe in a variety of vertical markets such as banking, manufacturing, healthcare, retail, distribution and other financial service industries.
