FastFacts: SecureChex

SecureChex is a secure software-based MICR laser check printing solution that enhances your check printing process with powerful signature security, easily maintained checkbooks, and support for division of duties to secure the printing process with one or multiple required passwords (also encrypted).

SecureChex Features:

- **Secure MICR Laser Checks** merge with your application output natively on the IBM i for maximum reliability and security
- **Print** crisp professional looking laser checks to inexpensive HP-compatible network laser printers, with logos, lines, boxes, shading, different fonts, secure signatures, MICR Line, check number and even barcodes
- **Secure Blank Check stock** eliminates storage & handling of multiple pre-printed check stocks, signature equipment - and obsolete impact printers. Amount prints in secure unalterable font
- **Password Protected Access** requires a user to login with an authorized signature to be able to access any of the secure check functions.
- **Checkbooks** store separate bank account and routing number for each bank account. Restrict by user who can access any phase of the check production process.
- **Control** who can access and make changes to the check design (lines, boxes, logo etc.)
- **Secure Signature** control who can add signatures, who can print signatures on which check and under what conditions. Can require multiple secure password authorization in order to print a signed negotiable item, all controlled with encrypted software. No hardware to fail, misplace, or lose.

- **Profile Level Security** lets control who has access to which functions of the Secure Checks software, and the passwords by user.
- **Check Register** keeps accurate log of everything that has printed through Secure Checks. Also generates a Positive Pay file to provide to your bank for ultimate ant-fraud protection!

SecureChex will print to inexpensive network laser printers - utilize your existing printing technology. No need for expensive, proprietary “MICR-enhanced” printers that force you into long term contracts. Use almost any laser printer you can obtain MICR toner for, from whomever you prefer to do business with. All you need is SecureChex, a printer, check stock, and MICR toner.
