DRV FlexTools bring your IBM i, iSeries and AS/400 report and forms management into the 21st century with Paperless Report and Document Distribution and System Monitoring.

Paperless Report and Document Distribution automatically converts IBM output to electronic formats including PDF and Excel, distributing by email and archiving copies on network servers for on-demand viewing and retrieval. Intelligent report splitting based on variable data can dynamically name and deliver reports to multiple users by email.

System monitoring ensures smooth operations with pro-active system management, monitoring messages, jobs, even system resources to notify you of issues before they become problems.

100% native RPG software solutions, FlexTools require no additional hardware.

MessageFlex:

System Monitoring for the IBM i

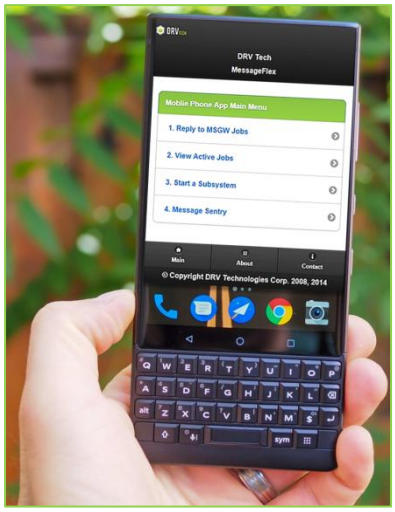

MessageFlex: IBM i System Monitoring

What is MessageFlex?

MessageFlex is IBM Power System i monitoring software that watches for system and program messages, jobs and job queues, subsystems and even system resources, sending notifications by email or text message, enabling proactive system management to detect issues before they become problems. DRV's Phone App lets you securely view and even answer messages from remote locations.

Features:

- Monitor *any number* of message queues for messages in real time
- Monitor for any message ID, message text, message type or message severity
- Immediate message notification sent by system message, email, or text message
- Attach document to email notifications, such as a "how to" document to fix the problem
- Monitor Job Queue to alert you if a threshold of jobs are backed up
- Monitor Subsystems to notify you if they are running or not
- Monitor for specific Job to tell let you know if it is running or not
- Monitor System Resources to let you know if disk space is running low
- Send notifications to individuals or a group address
- Easy to setup and automate without any programming

Benefits:

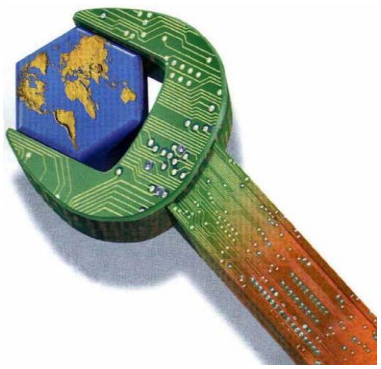

- Maintain real time control over your entire system around the clock
- Escalate response to critical messages before issues become operational problems
- Reduce unscheduled downtime with immediate alerts
- Reduce/Eliminate failed job execution due to unexpected issues in job stream
- Improve IT departments effectiveness resolving issues before users encounter them
- Reduce lost productivity due to nightly jobs not completing on time
- Early notification of pending issues such as failed tape drive, failed disk drive, or serious storage condition may exist"
- Empowers proactive rather than reactive system management

The IBM Power Systems (IBM i, System i, iSeries, AS/400) do a great job telling you how the system is performing if you have the time to monitor it but how can the system alert you if you are not at a console? MessageFlex is your extra set of virtual eyes that never sleep, doesn't take vacation, and keeps a lookout for you 24 hours a day!

Support & Implementation

Annual Maintenance

- There is no maintenance fee the first year. DRV's Annual maintenance is calculated at 20% of software list price at time of purchase and is invoiced annually.
- Annual maintenance includes unlimited technical support from our corporate headquarters here in Atlanta, GA USA, and also provides free software updates and enhancements provided via the web.
- License transfers - New activation codes due to system upgrades that change serial or processor number are provided at no charge to customers with active maintenance.
- FlexTools High Availability License provides a permanent code for a second box for 24/7 availability. Pricing will vary with configuration.
- One 30 day temporary Disaster Recovery license is included once per year with active maintenance at no additional charge.
- All FlexTools are compliant with OS V5R4 or higher, up to and including the most recent IBM OS releases
- Software, Updates and Documentation are provided online for 24/7/365 access.

Implementation / Training

- MessageFlex is easy to set up; most clients implement critical monitors during the 15-day free trial. DRV provides technical support throughout the free evaluation to help you determine quickly how the software will work in your environment.
- Desktop sharing technology lets DRV support agents to view your screen, making set up and support a snap!
- DRV provides live online training sessions with project managers, eliminating overhead associated with travel, and keeps implementation costs low.
- All DRV software is backed by a ***30-day money back guarantee!***

All DRV FlexTools are supported by current versions of IBM OS and easily integrate with your existing information structure without modifications to your applications. DRV offers free demonstrations to provide solution overviews and case studies to show you how other organizations use the software to streamline their document management. For proof of concept, you can download SpoolFlex for a free 15-day, fully supported evaluation on your system.

Whether your business is healthcare, finance, manufacturing, distribution or even a government agency, DRV FlexTools will streamline your report and document management and provide 24/7/365 system monitoring for a small investment.
