# FastFacts: DBXFlex

What is DBXFlex?

DBXFlex is an IBM i report writer that lets you extract data from one or multiple IBM database files and output to convenient PC file formats including true Excel (XLSX), CSV, PDF and spooled file. DBXFlex integrates with SpoolFlex paperless report management to automate distributions that run transparently in the background, converting, emailing, and archiving custom reports without lifting a finger.

- **Query Single or Multiple Database Files:** Capture the report information you need and build the custom reports for your business intelligence requirements without having a Ph.D. in computer science! Join multiple database files by selecting data by record range, and select the fields you want for your custom reports.

Menu-Driven

Direct PDF Output

DBXFlex Brings Custom IBM i Reporting into the 21st Century!

Multiple Formatting Options

Direct Excel Output with True XLSX

- **Extract to Windows Formats:** Convert raw data from the IBM i directly into Excel (XLS <u>and</u> XLSX), PDF, CSV, and print files. Push files to network servers for archiving or email directly to the users that need the data.

- **Easy to Use Business Intelligence:** Extract entire database files or create custom reports by extracting select records from IBM i database files using an easy, intuitive, menu-driven software that's easy to deploy and well supported.
