

USING DATABASE SOFTWARE TO CREATE REPORTS ON YOUR IBMⁱ

WHY

Your IBM power server is rich with business intelligence. But the tools to extract it are often poor. Well designed software provides the means to extract key information from your database directly into custom reports, spreadsheets, and PDFs.

WHAT TO LOOK FOR IN DATABASE QUERY FUNCTIONALITY

INTUITIVE MENUS

If you need a programmer to set it up and use it, it's an outdated software model

ABILITY TO EXTRACT FROM SINGLE OR LINKED DATABASE FILES

Some reports require multiple sources of information that are not always located in the same database.

SELECTION PARAMETERS

- Select data by record range to extract the records you want for your report
- Use wildcards to quickly extract only the data you specify
- Use Field level selection to include only the data you want on your report

GET REPORTS DIRECTLY INTO A VARIETY OF FORMATS

Extract data directly to excel or spreadsheet reports, PDF reports, CVS, Word, and more.

EFFICIENCY, AUTOMATION AND DISTRIBUTION FEATURES

- Ability to save report templates
- Scheduling feature to automate recurring custom reports
- Automate email distribution of reports
- Override record selection values at run time
- Override database file names at run time

HOW TO INSTALL DATABASE QUERY SOFTWARE

Database query software should require no more than a few clicks to be implemented on your IBM system. A simple restore library will install the software and activate with security code
